Webinar “Achieving Carbon Net-Zero”

This is to invite representatives from the members of the Japanese Chamber of Commerce and Industry of the Philippines Inc. to a webinar titled “Achieving Carbon Net-Zero”. As the movement on decarbonization accelerates globally, the industry sector is also required to respond to those trends. However, doing business in emerging countries still needs a lot of energy such as electricity and fuels to grow industries. It is a challenge for the government and industry players to balance between environmental protection and economic growth.

This webinar aims to inform companies on the feasible methods towards achieving net-zero carbon emissions in the Philippines. In this webinar, the current government policy on the renewable energy, available services by the electricity retail supplier to utilize renewable energy options, and feasible measures that the company can take will be shared by the speakers from the Department of Energy, First Gen, and NRI Singapore Manila Branch.

If you wish to join this webinar, please register at JCCIPI member’s website by July 9, 2021.

We appreciate your continued support to the Japanese Chamber of Commerce and Industry of the Philippines Inc.
